

Chronoceptive Calibration Error ε — 13 scored agents (7 vendors, 4 Chinese labs)

Solid bar = Setting A; hatched extension = Setting B. Dashed rule = Augustine

threshold $\varepsilon^* = 0.20$; no agent crosses it, the closest sits $2.7 \times$ above.

ε = mean of the two measured axes, each a median. Red n_p marks cells below $n = 15$.

Model			ε (Setting A $\rightarrow$ Setting B)	$\varepsilon(A)$	$ CAR - 1 $	$ \rho $	n_p
