

Reverse-Scaling Theorem — four independent confirmations

Under CIT, $\mathbb{E}[|\rho| \mid K]$ is monotone non-decreasing in reasoning-token expansion K . Bars darken as K (or the analogous scaling axis) grows. Dashed green rule: Augustine threshold $\varepsilon^* = 0.20$.

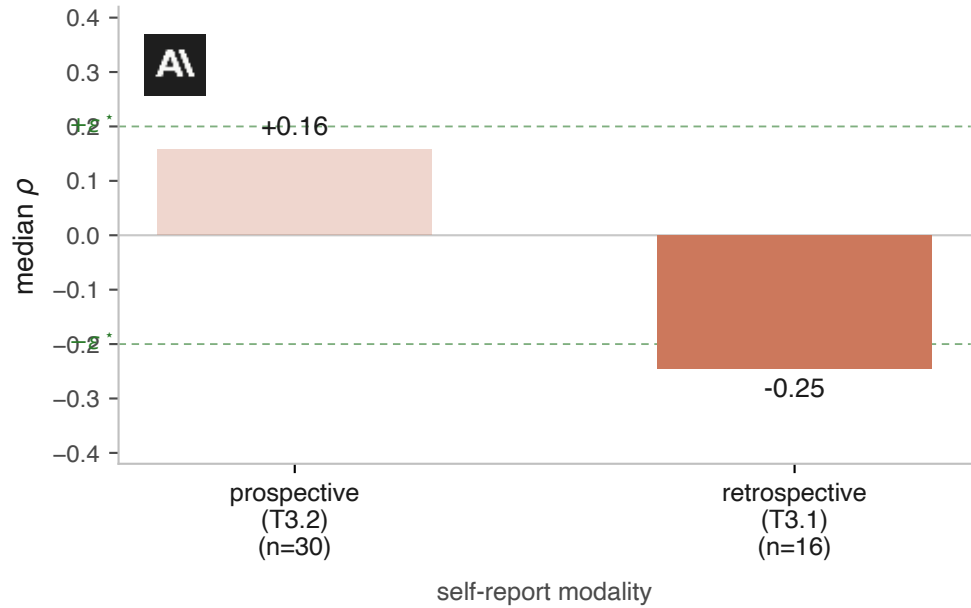

(a) Intra-model · o4-mini effort ladder

(b) Cross-model · Sonnet 4.6 ± extended thinking

(c) Within-model · prospective vs.\ retrospective (Sonnet + thinking)

(d) Cross-vendor · GLM-5.2 ± date injection
