

The Agentic Frontier: $T_{\max}(A) \cdot S_{\max}(A) \leq C/\varepsilon_{ST}(A)$
Joint deployment region on the (T, S) plane. Five long-horizon benchmarks placed at their characteristic load; three constant- ε_{ST} frontiers plotted. Shaded regions name the binding axis.

Paper 1 bounds the T -axis (Augustine, CIT). Paper 3 bounds the S -axis (Cartographic, SIT). Together: the joint Agentic Frontier.
